

While many payment processors rely on third parties through integrations for their ACH payment solutions, linked2pay was an early mover, building full ACH payment capabilities on its own platform.

In fact, as early as 2006, the company deployed the first elements of its ACH functionality, and by 2014 it was awarded the gold medal for ACH Innovation, presented by the president of NACHA.

linked2pay continues to deliver its time-proven, native ACH solution that helps ISOs of all sizes grow with lower-cost payments and broader merchant coverage. The platform simplifies onboarding, compliance, underwriting, and risk controls so ISOs can board merchants quickly and confidently.

ISOs gain automated returns handling, configurable limits, detailed reporting, and fraud tools—within the same unified gateway.

With white-labeling, flexible APIs, and easy integration, linked2pay provides a scalable, reliable ACH solution that boosts revenue and reduces operational effort.

One of many strong examples is how ISO partners leverage ACH for CNP merchants, where it enables fully compliant dual pricing—contact us to learn more and start using award-winning ACH to your advantage.

more than just a
